Letter of Recommendation

Dear Admissions Committee,

It is my great pleasure to recommend Vazirakhon Bekturdieva, one of the most capable students I have taught during my years as a mathematics teacher at School No. 51 in Samarkand, Uzbekistan. I have taught Vazirakhon for the past five years, during which I have closely followed her academic growth and watched her develop into a disciplined, analytical, and remarkably persistent student.

Vazirakhon has stood out for her academic excellence throughout her schooling, completing her basic secondary education with honours and earning a perfect score of 5.0 out of 5.0 in every subject, including Algebra and Geometry. More recently, I helped prepare her for the mathematics section of the SAT, where she achieved a score of 680, contributing to a total score of 1440. In my classes, she consistently demonstrates strong analytical thinking and does not look for shortcuts: when she encounters a difficult problem, she works through it methodically, revisiting each step until she fully understands the underlying logic. This patience and rigor are what I value most in her as a student of mathematics.

What stands out to me most about Vazirakhon is how naturally she connects mathematical reasoning to the wider world. She does not treat mathematics as an isolated subject, but as a tool for thinking clearly about complex systems and evaluating evidence. This mindset aligns closely with her growing interest in international relations and political science, fields where quantitative literacy is increasingly essential for interpreting data, modeling outcomes, and assessing policy.

Beyond her academic ability, Vazirakhon is a responsible and highly motivated student. She is respectful in the classroom, meets every deadline, and never avoids challenging material, even when it requires considerable extra effort on her part. She is also generous with her time, regularly helping classmates who struggle with concepts she has already mastered.

In conclusion, Vazirakhon Bekturdieva is among the most disciplined and intellectually capable students I have taught. I am confident she will bring the same rigor, perseverance, and curiosity to your university community that she has shown in my classroom. She has my highest recommendation for admission to your institution.

Sincerely,

Ilchenko Elena Alekseevna
